

TRAILER SOLUTION
MANUFACTURING FACILITY

COMPANY PROFILE

HEAVY-DUTY TRAILER MANUFACTURING

A Dubai manufacturing facility building trailers to specification — from structural steel cutting through to final inspection, all under one roof at Ras Al Khor. Supplying fleets across the UAE and the GCC since 2013.

A Manufacturer, Not a Reseller

Every chassis is fabricated in-house at our own facility in Dubai.

Since 2013, Trailer Solution has been designing and fabricating heavy-duty trailers from our facility in **Ras Al Khor Industrial Area 2, Dubai** — built for logistics fleets, transport companies and contractors across the UAE.

Every chassis is fabricated in-house, from structural steel cutting and welding through to final finishing. We build to your axle configuration, payload and cargo requirements — **not off a fixed catalogue** — so what leaves our yard is matched to the job it is going to do.

From single trailers to fleet orders, our team works directly with owners and operators to spec, build and deliver on time. There is no outsourced chassis and no third party between you and the people cutting the steel.

We work in **English and Arabic**, and we supply buyers across the wider Gulf as well as the UAE.

BUILT TO CUSTOM SPEC

“Every chassis is inspected before it becomes someone's livelihood on the road.”

WHAT WE ENGINEER AROUND

Axle Configuration

Two, three or more axles, spaced and specified for the payload and the limits on your route.

Deck Height & Length

Set against your cargo and your tractor unit, so coupling height and turning clearance work in practice.

Corrosion Protection

Surface preparation and coating chosen for UAE heat, humidity and coastal exposure.

Payload & Load Distribution

Chassis sized for the weight it will actually carry, with load spread through the frame rather than concentrated over the bogie.

Cargo-Specific Bodywork

Built around how the load is actually handled — decked, caged, curtained, enclosed or ramped.

Fleet Consistency

Repeat builds to the same approved spec, so units added later match the ones already running.

Trailer Types & Products

Six core ranges, each fabricated to order — combine, extend or customise any of them to match your operation.

01

A-Frame Trailers

Heavy-duty tandem-axle flatbeds with a raised A-frame rack and upper lashing hooks for securing long or tall loads such as pipes, glass and steel sections.

60-TON CAPACITY

TANDEM AXLE

A-FRAME RACK

02

Flatbed & Stake Body

Open-deck cargo trailers with removable stakes and mesh sides for general freight, building materials and palletised loads.

REMOVABLE STAKES

MESH SIDES

OPEN DECK

03

Curtain-Side Trailers

Flatbeds fitted with an arched canopy roof and caged sides — weatherproof cargo cover with fast side-loading access.

ARCHED CANOPY

WEATHERPROOF

SIDE ACCESS

04

Box & Reefer Trailers

Fully enclosed box trailers, insulated and refrigeration-ready, for dry goods, retail distribution and temperature-sensitive cargo.

INSULATED

REEFER-READY

ENCLOSED

05

Heavy-Duty Cargo Trailers

Reinforced mesh-sided trailers built for scrap, aggregate and loose heavy cargo where extra containment and durability matter.

REINFORCED MESH

HEAVY LOAD

DROP SIDES

06

Car Carrier Trailers

Open-deck single-level vehicle transporters with a full-length top walkway, mesh loading ramp and multiple lashing points for cars and light vehicles.

Need Something Different?

Every trailer is built to spec. Tell us your axle count, payload and cargo type, and we will fabricate to match — including combinations that are not in the six ranges above.

From Spec Sheet to Road

Seven stages, all under one roof at our Dubai facility.

01 | Specification & Design

We start with the job the trailer has to do — cargo type, payload, route and the tractor unit it will run behind. Axle count, chassis length, deck height and coupling geometry all follow from that, not from a template. You approve the spec before any steel is cut.

02 | Structural Steel Cutting

Main beams, cross members and gussets are cut to the drawing. Getting the profile right at this stage is what keeps the chassis straight later — a few millimetres of error here compounds across the length of the frame.

03 | Chassis Fabrication & Welding

The main frame is jugged, squared and welded by our own fabricators. Load paths run continuously through the chassis so stress transfers into the structure rather than concentrating at a joint. Welds along the primary beams are checked as the frame goes together, not only at the end.

04 | Suspension, Axles & Braking

Suspension and axles are mounted to the approved configuration, and the braking and air systems are plumbed in. Axle alignment is set at this stage — it is the single biggest factor in how evenly the trailer wears its tyres over the years that follow.

05 | Surface Preparation & Paint

The frame is cleaned and prepared before coating. In UAE conditions — heat, humidity, coastal salt and construction dust — surface prep is what decides whether the finish is still intact in year five. Colour and livery are done to your requirement.

06 | Bodywork & Fit-Out

Decking, sides, stake pockets, curtains, box panels, ramps or reefer insulation are fitted according to the build. Lighting, wiring, mudguards, landing legs and safety markings go on at this stage.

07 | Inspection & Handover

The completed unit is checked over before it leaves the yard — structure, brakes, lighting, coupling and finish. You or your agent are welcome at the facility to inspect the finished trailer before it goes.

CAPABILITIES

Services Built Around Your Fleet

From first sketch to final delivery, our Ras Al Khor facility handles every stage of the build in-house.

- **Custom Fabrication**
Built to your exact axle configuration, deck length and payload requirement — not a fixed catalogue spec.
- **Precision Welding & QC**
Every chassis is inspected at each fabrication stage, from frame welds to axle alignment, before it leaves the yard.
- **After-Sales Support**
Ongoing spare parts, repair and maintenance support from the same team that built your trailer.
- **Heavy-Duty Steel Construction**
Structural steel chassis with corrosion-resistant coating, engineered to handle UAE heat, load cycles and mileage.
- **UAE-Wide Delivery & Registration**
Support through RTA registration and delivery of your finished trailer anywhere in the UAE.
- **Fleet & Repeat Orders**
From single units to multi-trailer fleet orders, built to one approved specification.

BUYING FROM OUTSIDE THE UAE

We Supply Across the GCC

We have supplied buyers in Saudi Arabia, Oman, Qatar, Kuwait and Bahrain. Your trailer is built and handed over at our Ras Al Khor facility in Dubai, and you or your transport agent collect it — with the export documentation supplied by us. Customs clearance itself is handled by you or your agent.

SAUDI ARABIA

OMAN

QATAR

KUWAIT

BAHRAIN

UNITED ARAB EMIRATES

Collection from Dubai

Finished, inspected and ready at Ras Al Khor. Inspection before collection is welcome.

Documents Supplied

Commercial invoice, certificate of origin and the technical documentation for the trailer.

Own Wheels or Low-Bed

Towed out behind a tractor unit, or carried out on a low-bed or flatbed.

How an Order Works

01 · Tell us the job

Cargo type, payload, route and the tractor unit it will run behind. A rough idea is enough to start.

02 · Spec and quotation

We come back with a full specification, a price and a lead time confirmed in writing, before you commit.

03 · Build and handover

You approve the spec, we cut steel. The finished unit is inspected before it leaves the yard.

WHAT OUR CLIENTS SAY

Trusted by Fleets Across the GCC

From single-unit owners to logistics operators running dozens of trailers.

★★★★★

Very professional team from start to end. The trailer was built exactly according to our requirements, and the quality of the fabrication was excellent.

AHMED KHAN

★★★★★

Trailer Solution understood exactly what I needed and provided a strong, reliable trailer at a competitive price. The process was smooth.

MUHAMMAD ALTAF

★★★★★

Good quality trailer and very responsive customer service. The trailer was delivered within the agreed timeframe — I would definitely get back to them.

FAISAL MUNIR

Tell Us What You Need Built

Send us your axle count, payload and cargo type and we will come back with a spec, a price and a timeline — usually within one working day.
